INT. RUSA JAKARTA HEADQUARTERS ENGINEER ROOM DAY

RYUU [INTERVIEWER]
Good morning, you are selected from each of your respective fields for a brief survey, my name is RYUU. This is for, uh... the Engineering department, am I right?

ALDRIC [AEROSPACE ENGINEER]
Yeah.

RYUU [INTERVIEWER]
Alright, let's get started. Alright, um, first question, what are your current roles at RUSA?

ALDRIC [AEROSPACE ENGINEER]
(cocky)
I'm an aerospace engineer, I design the ships. We're practically the backbone of the place.

WILLSEN laughed.

WILLSEN [BIOLOGICAL ENGINEER]
I'm part of the bio eng team.

TOMMY [AGRICULTURAL ENGINEER]
I'm in agricultural.

RYUU [INTERVIEWER]
(writing on notepad)
Oo...kay. So, let's start with the aerospace team, what do you do as an aerospace engineer?

ALDRIC [AEROSPACE ENGINEER]
(grinning)
I just told you, I design and build the ships.

RYUU [INTERVIEWER]
I mean specifically, what are the bureaucracies you face during designing the ships and whatnot.

ALDRIC [AEROSPACE ENGINEER]
(scoffs)
I mean, I'd start by designing the blueprints for the design of the ship. Then we'd send our blueprints for approval to the top, then yadda yadda yadda, boom, rocket ship built, baby.

RYUU [INTERVIEWER]
Who do you send the designs up to?

ALDRIC [AEROSPACE ENGINEER]
Well, I don't know who specifically gets them, all I know is that currently I place my proposals on the mailbox on the third floor, and I get an approval like a few days later.

RYUU [INTERVIEWER]
(writing on notepad)
So they can reject your designs?

ALDRIC [AEROSPACE ENGINEER]
(cocky)
Me personally? No.

ALDRIC laughs.

ALDRIC [AEROSPACE ENGINEER]
But I know some people that have been rejected.

RYUU [INTERVIEWER]
Alright, how about building the ships, how does that work?

ALDRIC [AEROSPACE ENGINEER]
Usually some of us are assigned to build one ship, you know? The top would usually require a progress report, usually the report would be a one-man job from the team assigned. Oh, right, I almost forgot, we'd usually request data and information on built ships from the data analyst team, I'd usually ask by the same mailbox as before, but they could sometimes just outright reject the request.

RYUU [INTERVIEWER]
How about that progress report? What do they usually ask for?

ALDRIC [AEROSPACE ENGINEER]
Come again?

RYUU [INTERVIEWER]
The progress report, what's in it?

ALDRIC [AEROSPACE ENGINEER]
Uh, simple stuff you know? Date, status report, description on what we've done, problems if any, plans for next time? Yeah things like that.

RYUU [INTERVIEWER]
(writing on notepad)
Oo...kay, I think we can move on to TOMMY from the agricultural engineering team. What does your team do?

TOMMY [AGRICULTURAL ENGINEER]
I'd say my team's at a similar place, but I don't design plants, I test on them.

RYUU [INTERVIEWER]
How are the tests determined? Is there like a general test you do or a specific test for each plant?

TOMMY [AGRICULTURAL ENGINEER]
Both exists, but for any test to happen at all within an experiment, we also gotta make a request for that test to even do it. But if someone else has done that test previously, then it's all fair play, granted it is a general test or if it's a specific test, we are testing on the right species.

RYUU [INTERVIEWER]
So you've got a list of them right now? The tests?

TOMMY [AGRICULTURAL ENGINEER]
Yeah, test names, the procedures, the species it's specifically for, category, you name it.

WILLSEN [BIOLOGICAL ENGINEER]
(smiling)
I got those, too.

RYUU [INTERVIEWER]
Okay wait, I think I have one very critical question, what is the difference between a test and an experiment? Are you using the term interchangeably?

TOMMY [AGRICULTURAL ENGINEER]
Oh heavens, no. An experiment is the entire process, a test happens on each log of the experiment, and experiments can go on for days at a time. So, an experiment can have many tests, basically like that. The goal of an experiment is to find out about something, whereas tests are the things we do to find out.

RYUU [INTERVIEWER]
Ohh, that clears things up greatly! Thank you.

TOMMY [AGRICULTURAL ENGINEER]
No problem.

RYUU [INTERVIEWER]
(writing on notepad)
So, how about the experiments? Are they done liberally or are they assigned to you? Like, similar to the aerospace team?

TOMMY [AGRICULTURAL ENGINEER]
They are assigned to us, there are multiple of us on each experiment I guess, and each experiment could handle multiple plant species at once.

RYUU [INTERVIEWER]
And this experiment could go on for days?

TOMMY [AGRICULTURAL ENGINEER]
Yeah, and each day we'd have got to save a log on our findings that day based on the tests we performed, like the people involved that day, the plants tested on, what the test is, what we did and have not done, and uh...I think that's it.

RYUU [INTERVIEWER]
(writing on notepad)
Spectacular. I think we can move on to the bio engineering team?

WILLSEN [BIOLOGICAL ENGINEER]
(smiling)
About time, but to be quick, we're basically the same with the agricultural team, difference is we experiment on all species, not just plants. Oh, and before I forget, we also have got a list of every species we've ever documented and every experiment we've conducted, and, oh, we can conclude our experiments to be completed, I think TOMMY forgot to mention that during his part.

TOMMY [AGRICULTURAL ENGINEER]
(giggling)
Oh yeah, totally forgot.

RYUU [INTERVIEWER]
(confused)
Wait, so what's the difference between a team of bio engineers who are currently experimenting on plants and the agricultural team?

TOMMY [AGRICULTURAL ENGINEER]
It's more on the type of tests we conduct to be honest. I'm kind of leaning towards a selective breeder. Basically our main goal to get stronger plants, suited for people outside Earth.

RYUU [INTERVIEWER]
So, you've been to space before?

WILLSEN [BIOLOGICAL ENGINEER]
Well, some of us are assigned to do experiments outside Earth, so yeah.

TOMMY [AGRICULTURAL ENGINEER]
Yeah, I've been assigned once, too.

ALDRIC [AEROSPACE ENGINEER]
It's rarer for an aerospace engineer to be assigned out of Earth, too, but I've seen it happen a few times.

RYUU [INTERVIEWER]
(writing on notepad)
I see. Well, this has been a productive conversation, I don't think I have anymore questions. Do you have any for me? Or any more notes you'd like to add?

TOMMY, WILLSEN, and ALDRIC look at each other.

TOMMY, WILLSEN, ALDRIC
(in unison)
Nah.

RYUU [INTERVIEWER]
Alright, I guess that would be all for today. Thank you for your time, gentlemen.

End of transcript.

2 Data Analysts

INT. RUSA WASHINGTON D.C. HEADQUARTERS DATA ANALYST CONFERENCE ROOM DAY

RYUU [INTERVIEWER]
Good afternoon, you are selected from the data analyst team for a brief survey for an internal software we are developing. My name is RYUU, and I am talking to BRENDA and CELINE from the data analyst team, right?

BRENDA [DATA ANALYST]
Yes, my name is BRENDA from the data analyst team.

CELINE [DATA ANALYST]
I'm CELINE, and I'm also from the data analyst team.

RYUU [INTERVIEWER]
Alright. First question, what does the data analyst department do?

BRENDA [DATA ANALYST]
It's a lot of things really, but it comes down to handling requests from external parties within the company.

RYUU [INTERVIEWER]
(writing on notepad)
Ah that's right, I've actually heard from the other teams that they send you a data request, right?

BRENDA [DATA ANALYST]
Yeah, that's pretty much our main role.

RYUU [INTERVIEWER]
So, would you say the flow of things within the department is incoming external requests, then data processing from your team, then the team would send back the processed data?

CELINE [DATA ANALYST]
There's usually a request approval process as well. We would usually print out the request and place it on the mailbox we have by the restroom over there.

CELINE points to a white box on the edge of the corridor.

CELINE [DATA ANALYST]
Then we would usually get an approval or a rejection on the data request the next day.

RYUU [INTERVIEWER]
(writing on notepad)
Interesting. Do you know who the requests are being forwarded to?

BRENDA [DATA ANALYST]
It's a higher up, I've seen 'em watching over us once or twice. The team calls 'em The Statistician, I think?

CELINE [DATA ANALYST]
(grinning)
Yeah, we don't really know their names, hahaha.

RYUU [INTERVIEWER]
So, the requests, they'd have a format, I assume?

BRENDA [DATA ANALYST]
Yeah, pretty much. A header, the requestee or 'ees, the date of request, and uh...to be fair it's a lot, I can just send you a copy of a one later.

RYUU [INTERVIEWER]
(chuckling)
Alright, that's fine with me. Next question then, who usually sends the requests?

BRENDA [DATA ANALYST]
It's usually from a lot of departments, I don't think we have a specific list, right CEL?

CELINE [DATA ANALYST]
Yeah, we don't have a specific list of departments that are allowed to request data from us, as far as I know anyone's welcome, pretty sure.

RYUU [INTERVIEWER]
Alright then, how about specific data accesses for your department?

CELINE [DATA ANALYST]
I think we cover all the grounds to be honest. Writes and reads on all available data.

BRENDA nods in approval.

RYUU [INTERVIEWER]
How about specific operations you guys would use?

BRENDA [DATA ANALYST]
Myself, I'd only usually use filters, averages, modes, medians, variance, pivots, uh...got any more, CEL?

CELINE [DATA ANALYST]
Maxes, mins, graphs? Couldn't think of anymore to be honest.

CELINE laughs.

RYUU [INTERVIEWER]
(writing on notepad)
Oo...kay. I think that's all the information I need for now. Do you have anymore questions or information you would like to provide before we end this meeting?

BRENDA [DATA ANALYST]
I don't think so.

CELINE shakes her head.

RYUU [INTERVIEWER]
Alright then, I guess that would be all for today, thank you for the time.

End of transcript.

3 Security Teams

INT. RUSA OMICRON-18 SPACE STATION CANTEEN

VERON [INTERVIEWER]
Good afternoon, as you may have guessed, you are selected for a brief survey for an internal software we are developing. Before we start, would you please introduce yourselves for the recording.

BERTRAND [EARTH SECURITY HEAD]
I'm the head of the Earth security team on the RUSA headquarters in Tokyo.

PAUL [EARTH SECURITY STAFF]
My name's PAUL, I'm part of the staff of Tokyo's security team.

MARCO [GALACTIC SECURITY HEAD]
I'm the head of Sector-01's security team.

WILLIAM [GALACTIC SECURITY STAFF]
And I'm part of his team.

WILLIAM points to MARCO.

VERON [INTERVIEWER]
Alright. Can you describe the difference between each security teams?

BERTRAND [EARTH SECURITY HEAD]
Well, uh, obviously, geographically, we're very different.

Everyone laughs.

BERTRAND [EARTH SECURITY HEAD]
But, we also handle very, uh, different things. Like for instance, my team in Tokyo, we handle the, uh, what do you call that? The incident report for all Earth's headquarters. We also announce incoming threats over to affected regions of Earth, really depends. We're more localized when you really try to compare us.

VERON [INTERVIEWER]
The announcements can be done by everyone in the team?

BERTRAND [EARTH SECURITY HEAD]
Oh, no, we do them. Oh yeah, I forgot to mention, the standard procedure is to send a request to our higher-up to broadcast the announcement, but the head of the team is the one to send that request.

MARCO [GALACTIC SECURITY HEAD]
Yeah, we're the same basically, the head requests for the announcement and we have incident reports, too, but we do it for sectors at a time, at the very least we can set a planet within our sector as our announcement target.

VERON [INTERVIEWER]
That's interesting, how do the sectors work?

MARCO [GALACTIC SECURITY HEAD]
I think formally it's every habitable planet within a 3.4 Light Years radius from a star? All I know it's based on the size of Earth's Solar System, though.

VERON [INTERVIEWER]
Oh, and I assume you're in charge of our sun right now?

MARCO [GALACTIC SECURITY HEAD]
Yeah, that would be right.

VERON [INTERVIEWER]
(writing on notepad)
Alright then. How about those incident reports? What are they? Who makes 'em?

WILLIAM [GALACTIC SECURITY STAFF]
Usually the staffs do. We either get reports from external parties or we see them ourselves, and then we have the incident report, it's an internal report documenting the incident based on the provided external report or from what we see ourselves.

PAUL nods in agreement.

MARCO [GALACTIC SECURITY HEAD]
But obviously, we also could do them, it's not just limited to the staffs, we just usually assign staffs to things and then they do the incident report.

BERTRAND chuckled and nods in agreement.

VERON [INTERVIEWER]
Then what do you guys do with the incident reports?

BERTRAND [EARTH SECURITY HEAD]
Not sure how they do it in space, but here on Earth it's to just, uh, act as an archive of sorts for us, so that we can handle similar situations in the future.

MARCO [GALACTIC SECURITY STAFF]
It's similar for where we are.

VERON [INTERVIEWER]
(writing on notepad)
Alright then, I think I have no more questions, does anyone have anything to add before we end this?

Silence for 2 seconds.

PAUL [EARTH SECURITY STAFF]
Oh, we handle the lost and found of our respective bases, we keep an archive of lost or found items with no visible owners at sight.

BERTRAND [EARTH SECURITY HEAD]
Oh yeah, I forgot I also have access to that. I'm not usually the one reporting or adding to that, uh, archive, the staff usually does.

VERON [INTERVIEWER]
But you can add or change to that archive?

BERTRAND [EARTH SECURITY HEAD]
Yeah.

VERON [INTERVIEWER]
(pointing towards the galactic security team's general direction)
I assume it's the same for the spacemen?

MARCO [GALACTIC SECURITY HEAD]
We don't really have that.

WILLIAM [GALACTIC SECURITY STAFF]
Yeah, when stuff gets lost, it's just gone out here.

WILLIAM laughs.

VERON [INTERVIEWER]
(writing on notepad)
Alright then, I guess that is it, anything else to add, gentlemen?

MARCO [GALACTIC SECURITY HEAD]
I'd like to add something. Make it possible so that we can communicate freely with our Earth counterparts or teams of different sectors.

BERTRAND [EARTH SECURITY HEAD]
Oh yeah, and for the Earth teams to be able to communicate with one headquarters to the other.

VERON [INTERVIEWER]
(writing on notepad)
How should that form of communication look like?

BERTRAND [EARTH SECURITY HEAD]
Uh, email-esque type? With groups and individual as targets, CCs, and BCCs.

VERON [INTERVIEWER]
Real-time?

BERTRAND [EARTH SECURITY HEAD]
Obviously! Haha!

VERON laughs.

VERON [INTERVIEWER]
Alright then, would that be all gentlemen? Or is there anything else you would like to add?

All four shake their heads.

VERON [INTERVIEWER]
Well then, I'm sure you are busy people, I would like to thank you all for attending to the survey, I would take my leave now. Have a blessed day, gentlemen.

End of transcript.

4 Scientists

INT. RUSA SINGAPORE HEADQUARTERS BREAK ROOM NIGHT

RYUU [INTERVIEWER]
Good evening, you have ben selected for a brief survey for the internal software being developed for RUSA. Would you please introduce the team you are representing.

STEVEN T. [BIOLOGIST]
I’m from the biologist team.

VINCENTIUS [CHEMIST]
I’m in the Chemistry department.

KOMANG [PHYSICIST]
I’m part of the Physics department.

OCTAVIUS [MATHEMATICIAN]
Mathematics department.

RYUU [INTERVIEWER]
(writing on notepad)
Alright, obligatory starter question, what do you guys do in your respective departments? Let’s that with the Mathematics department.

OCTAVIUS [MATHEMATICIAN]
I mostly just get assigned to stuff, then I just do the assigned task.

RYUU [INTERVIEWER]
Who assigns them?

OCTAVIUS [MATHEMATICIAN]
To be frank, I’m not really sure, he just signs the tasks with the, uhh..., artificial?

KOMANG [PHYSICIST]
The Artificer.

OCTAVIUS [MATHEMATICIAN]
Yeah, that’s the one.

RYUU [INTERVIEWER]
What kind of tasks do you usually get?

OCTAVIUS [MATHEMATICIAN]
It varies honestly, but it’s usually behalf of another department or division, like just recently me and couple other of guys got assigned to a problem from the aerospace engineering team.

RYUU [INTERVIEWER]
So the other teams request them to you?

OCTAVIUS [MATHEMATICIAN]
Meh, I’m not really sure, all I know is that I have tasks assigned to me signed by The Artificer.

KOMANG [PHYSICIST]
The physics department would usually request help as well, but we don’t do it directly to the Math department, we would send a help request to the mailbox on our department’s room, then the request can either come as rejected with a reason the next day back to our desks or is then forwarded towards the Math department.

RYUU [INTERVIEWER]
Interesting, does this apply for the other divisions as well?

KOMANG [PHYSICIST]
Wish I have an answer for that, hahaha.

RYUU [INTERVIEWER]
(laughing)
Alright then, back to the Mathematics department, can you describe the workflow of the tasks?

OCTAVIUS [MATHEMATICIAN]
It’s simple really, I get the task assigned to me, then I do exactly as requested, if I need more data, I can get some from the data analyst division. Then I just send back the results and my calculations.

RYUU [INTERVIEWER]
Through The Artificer?

OCTAVIUS [MATHEMATICIAN]
Exactly.

RYUU [INTERVIEWER]
How about the calculations? You write them down?

OCTAVIUS [MATHEMATICIAN]
Sometimes yeah, but if you're making an app, I'd prefer it be done in LaTeX.

RYUU [INTERVIEWER]
(writing in notepad)
Al...right then. Let's move on to the Chemistry department. What is your main role at RUSA?

VINCENTIUS [CHEMIST]
I guess it's pretty, like, similar, we're assigned to a task, for example, to experiment or observe minerals found on a newly discovered planet.

RYUU [INTERVIEWER]
Any specific category of items you experiment or observe?

VINCENTIUS [CHEMIST]
To be fair, not really, we do a lot of things honestly, basically we experiment or observe any matter that comes in our way.

RYUU [INTERVIEWER]
I see, and the person who assigns you your tasks is the same as the Mathematician team?

VINCENTIUS [CHEMIST]
Oh, no, it's The Observer for us chemists.

RYUU [INTERVIEWER]
Alright, interesting. How about, uhm, the tests? I've talked with some in the engineering division before, is it similar like them?

VINCENTIUS [CHEMIST]
I’m not sure how they do things there, but tests here are conducted in an ongoing experiment or observation, we then would log the result or progress of each test for the experimentation of that matter.

RYUU [INTERVIEWER]
The tests, are they proposed, or is it done liberally?

VINCENTIUS [CHEMIST]
We have a whole archive of tests we are allowed to do, but if we need new ones, we’d need to propose a test to the people above, and those could get rejected.

RYUU [INTERVIEWER]
Interesting, so it’s very similar to the engineering division. How about how many people can be involved in an experiment at once?

VINCENTIUS [CHEMIST]
Each experiment could involve multiple people and multiple matters at once, but each experiment logs would be documented only by the attending chemists at that time.

RYUU [INTERVIEWER]
Alright then. How about tests and experiments? Are there differences? Or are you using those words interchangeably?

VINCENTIUS [CHEMIST]
(grinning)
It’s kinda complicated, but basically, an experiment is like the, uhm, it’s like the long run, and we’re supposed to provide logs of our findings each day.

RYUU [INTERVIEWER]
Uh huh.

VINCENTIUS [CHEMIST]
For each log, we would need to show what test we did on that item. A test, however, stands alone by itself, it shows the procedure of what to do and the expected outcome, or the goal of the test basically. Like for example, we have an experiment on, let's say, a rock found on Mars, we would then perform multiple tests, like throwing it against hydrogen sulfide to see how it would react.

RYUU [INTERVIEWER]
(writing on notepad)
Interesting interesting, alright then, makes sense. How about the uhm, what did you call them, the matter, right?

VINCENTIUS [CHEMIST]
Yeah.

RYUU [INTERVIEWER]
Yeah, okay, obviously you've got an archive of them right?

VINCENTIUS [CHEMIST]
Of course! But it's kinda uhm, hard to say, I think for better context, you should move on to either of the other departments first. but I can tell you that we have an archive of our experiments.

RYUU [INTERVIEWER]
(laughing)
Alright then, let's move on to the Biology team. Standard question, what does your team do at RUSA?

STEVEN T. [BIOLOGIST]
Finally.

VINCENTIUS laughs.

STEVEN T. [BIOLOGIST]
I mean I'd say we're pretty similar with the chemists honestly. Except rather than the general "matter" thingy, we do observations with species.

RYUU [INTERVIEWER]
Observations? Oh right, VINCENTIUS did say something about observations as well, are they used interchangeably with experiments in this case?

STEVEN T. [BIOLOGIST]
I mean I guess you could say so, but my department lies heavily on literal observation rather than experimenting, sometimes we experiment though, but in the technical sense, it is interchangeable, like routine-wise, we do the exact same [EXPLETIVE] we always do, haha.

VINCENTIUS [CHEMIST]
(nodding)
Yeah. To be fair I was using them interchangeably, sorry for the confusion.

RYUU [INTERVIEWER]
It's alright, hahaha. Let's continue with the biology department, uhm, are there any other major difference between your department and the Chemistry department?

STEVEN T. [BIOLOGIST]
I mean, hmmmm, I don't think we have that much difference honestly when think about functional requirements honestly, just the things we experiment on. We're way different in our methods of operations during tests in experiments since we're almost always dealing with living beings that are still, you know, living.

RYUU [INTERVIEWER]
But you can deal with non-living beings?

STEVEN T. [BIOLOGIST]
Of course, I mean recently we discovered a new reptile-like species over a newly discovered planet over at sector-12, they sent us a sample of its skin for analysis for possible future uses.

RYUU [INTERVIEWER]
(writing on notepad)
That is interesting.

STEVEN T. [BIOLOGIST]
It’s one of the rare times we discover a new non-micro organism, but the paperwork is hell.

RYUU [INTERVIEWER]
You’re supposed to document it and add it to your archive?

STEVEN T. [BIOLOGIST]
Documenting’s the easy part, adding it to the archive is just paperwork upon paperwork, we’ve gotta get it through the higher ups first for approval to document it as a new species.

RYUU [INTERVIEWER]
So you have a list of them?

STEVEN T. [BIOLOGIST]
Obviously, any updates to the our list of species is hell.

KOMANG [PHYSICIST]
To be fair, that also applies for literally any of our archives.

VINCENTIUS [CHEMIST]
(laughs)
That’s true. God, imagine finding a new type of alloy and having to document it, then you need to wait for approval, then you need to do your experiments on it, then more paperwork, it’s insane.

OCTAVIUS [MATHEMATICIAN]
Thank God I’m not in any of your departments.

RYUU [INTERVIEWER]
(writing on notepad)
Alright, I think we can move on to the last department, the physicists.

KOMANG [PHYSICIST]
To be frank, like, my department is identical to the last two departments. Just that we observe and experiment on the physical properties of objects and phenomenons.

RYUU [INTERVIEWER]
Wait, so what makes you three different other than being in specific departments?

VINCENTIUS [CHEMIST]
It’s really just the methods of experiments and observations honestly.

STEVEN T., KOMANG
(in unison)
Yeah.

STEVEN T. [BIOLOGIST]
Like it may seem like the biology department would just focus on specific parts of what you define as "matter" or "object", but we also do things differently. I’m pretty sure the other two don’t deal with living beings that often.

VINCENTIUS [CHEMIST]
Yeah. We primarily focus on the chemical properties of something.

KOMANG [PHYSICIST]
(nods)
While we focus on physical properties, y’know?

RYUU [INTERVIEWER]
(writing on notepad)
I guess that makes sense now that you explain it.

VINCENTIUS [CHEMIST]
Oh, right. About my list of matter, they coincide with the other departments honestly, like we have our own archives, but they generally have the same things from the other departments.

KOMANG [PHYSICIST]
Right, right, my department also has that, it's our own archive, yet they could be related with the other departments' archive of their own things.

STEVEN T. [BIOLOGIST]
Mine does that, too, but mine's mostly just on living beings since mine is a list of species. I think I discuss things mostly with the folks over at the bioengineering team.

RYUU [INTERVIEWER]
(writing on notepad)
Interesting. I wanna circle back on the experiments, do you conduct them only on things within your archive? How about things outside the archive? Do you need to propose the thing first, or experiment first so that the thing can be classified as a new, y'know, thing?

STEVEN T. [BIOLOGIST]
I'm not sure how it is for the others, but for my department, the process of proposing a new species to be kept in the archive is an experiment itself, once the experiment is concluded, only then could we file another document regarding details of the species.

RYUU [INTERVIEWER]
So, assigned to an experiment, experiment or observe, propose, then approve or reject?

STEVEN T. [BIOLOGIST]
Not necessarily. We're not necessarily always assigned to an experiment, we could propose our own. And for species proposals, the experiment is part of the proposal, it's like its own category of experiments if you must, hahaha. So we propose the experiment for the new species, wait for the experiment's approval, if approved, we do the experiment. Once it's concluded, we send our final document with the detail of the new species based on our findings.

VINCENTIUS [CHEMIST]
Yeah, my department operates similarly.

KOMANG [PHYSICIST]
Mine, too.

RYUU [INTERVIEWER]
(writing on notepad)
That is interesting. I want to make one thing clear, though, the experiments are not strictly tasks assigned to you guys?

STEVEN T., VINCENTIUS, KOMANG
(in unison)
Nope.

VINCENTIUS [CHEMIST]
We can propose experiments if we feel like doing one, but it would then need to wait for approval.

OCTAVIUS [MATHEMATICIAN]
(grinning)
I don't have experiments.

RYUU laughs.

RYUU [INTERVIEWER]
Alright, alright. This has been really insightful. I think I have no more questions for you, do you have anything else to tell me?

2 seconds of silence.

RYUU [INTERVIEWER]
Alright then, I think we can end the survey here. Thank you for the time, I wish you all a blessed day.

End of transcript.

5 Astronauts

INT. RUSA JUPITER 11 COCKPIT

VERON [INTERVIEWER]
Good afternoon, you have been selected for a survey for an internal software being developed for RUSA. Would you please introduce yourselves for the camera?

AGNES [ASTRONAUT]
Hi, my name is AGNES, I'm part of the wanderer's team at RUSA.

HELENA [ASTRONAUT]
My name is HELENA, and I have the same role as AGNES within RUSA.

VERON [INTERVIEWER]
Alright then, I think my first question would be, what's the difference between the astronauts and the wanderers? Hahaha. Because I was told that your official positions at RUSA were astronauts.

AGNES [ASTRONAUT]
(laughs)
To be fair, astronaut's a fairly new title, our positions used to be officially called wanderers before they changed it a few months back, so it's pretty much the same.

VERON [INTERVIEWER]
Ahh, I see I see. Alright then. Alright, I guess next question then, what are you main duties here at RUSA?

AGNES [ASTRONAUT]
We're basically the adventurers of RUSA. We discover new lands and new worlds.

VERON [INTERVIEWER]
Sounds fantastical, but how do you venture through the worlds, like the process from the start?

AGNES [ASTRONAUT]
Well, we're kind of limited in the sense that we are officially allowed to venture only to places we are assigned to by our higher ups, oh and for your information, officially, these are called missions by the higher ups.

HELENA [ASTRONAUT]
I mean we're still allowed to wander without being assigned.

AGNES [ASTRONAUT]
Yeah, of course, but we tend to avoid wandering too far cause it's a pain if you got assigned out to bum[EXPLETIVE] nowhere.

HELENA bursts out laughing.

HELENA [ASTRONAUT]
Reminds me of this one time when we had to travel 13 sectors just because you wanted to check out a rogue dwarf planet.

AGNES [ASTRONAUT]
(palms up)
Learned my lesson there.

VERON [INTERVIEWER]
(laughing)
So, after you're assigned, you just go to the place you're assigned to?

AGNES [ASTRONAUT]
Yeah, but we've gotta send occasional status reports.

VERON [INTERVIEWER]
This is for after arriving to the designated location, right?

AGNES [ASTRONAUT]
Both, actually. We need to show, like, our progress and such, a detailed report on what we're doing, what our next step is, and so on, so on.

VERON [INTERVIEWER]
Sucks the life out of it, huh?

HELENA [ASTRONAUT]
Kinda, but it’s still fun. You get to search for new planets, or if you’re lucky, you could venture deep into terrains previously untouched by the organization.

VERON [INTERVIEWER]
Is there a difference? When you look for new planets and when you do deep dives?

HELENA [ASTRONAUT]
Of course. There are two types of missions assigned to us, interstellar missions and terrain missions. Interstellar missions are missions in where we try to discover something within a given sector or possibly unmapped sectors, but we spend most of our times in our ship for that. Terrain missions would have us actually living on the celestial body for a couple of weeks.

VERON [INTERVIEWER]
(writing on notepad)
How are those determined? Like the missions you get?

HELENA [ASTRONAUT]
I’m not sure how it works, honestly, but I do know we all have a counter for how many of each type of missions we’ve gone, maybe that plays a part?

AGNES [ASTRONAUT]
It does, didn’t you hear? It’s more likely that we get missions we are much more familiar with.

HELENA [ASTRONAUT]
(giggling)
Oh, really? I didn’t know, honestly.

VERON [INTERVIEWER]
So, the higher your counter for terrain missions, the higher your chance of getting another terrain mission?

HELENA [ASTRONAUT]
Yeah, that’s what I heard last time.

VERON [INTERVIEWER]
(writing on notepad)
How about the counter, how do you keep track? Mentally?

AGNES [ASTRONAUT]
We have our own journal of the explorations which acts as our counter, but for a mission to be considered "official" and be added to our counter, we need for that mission to be "approved" as finished. Though I hope we could have an actual number to represent it later on.

VERON [INTERVIEWER]
How is it approved?

HELENA [ASTRONAUT]
it goes to our higher-up, since she’s not with us on missions, we need to go to the nearest company base, send our reports and findings through a mailbox at that base. Then we need to regularly check on it to see when we get our approval.

AGNES [ASTRONAUT]
It’s bull[EXPLETIVE], honestly. I mean I hope your software speeds up this progress.

VERON [INTERVIEWER]
(writing in notepad)
Interesting, so the counter is an update on your journal?

HELENA [ASTRONAUT]
Yeah. But it’s a real thing, I heard that they keep track of your missions, we just don’t have a better way of keeping track of our own and colleagues since we’re always moving around.

VERON [INTERVIEWER]
Interesting. Are you interested in digitizing your journals to be able to see your and your colleagues' journals?

AGNES [ASTRONAUT]
I mean, as long as it helps us keep track of our missions and actual counters, that would be fine by me.

HELENA [ASTRONAUT]
Yeah, just do that.

VERON [INTERVIEWER]
Alright, but why are you interested with your colleagues' counters, too?

AGNES [ASTRONAUT]
Because we don't always get assigned with the same partners for every mission.

HELENA [ASTRONAUT]
Yeah, it would be good to keep track of the people you're working with, so that you'd know their experience.

VERON [INTERVIEWER]
Oh? How do you know which people you get assigned with?

AGNES [ASTRONAUT]
It's stated on the mission's document, they will show you the location, the procedures, the dangers, the people assigned, and much more.

VERON [INTERVIEWER]
(writing on notepad)
Al...right. Hmm, I think that's all the questions I have for today's survey, do you have anything else to tell me before we end the meeting?

1 second of silence.

HELENA [ASTRONAUT]
I don't think I have anything else, to be honest.

AGNES [ASTRONAUT]
Me neither. I guess, just make sure to make the software really easy and enjoyable to use. And don’t forget what we wanted.

All three laugh.

VERON [INTERVIEWER]
Alright then, I guess we can end today’s interview here, thank you for the time ladies, have a wonderful day.

End of transcript.

6 Exoplanet Settlers

INT. RUSA SETTLER'S HEADQUARTERS, RODAK CITY, PLANET YGGDRASIL DAY

VERON [INTERVIEWER]
Good afternoon, you are here because you are selected for a survey for an internal software being developed for RUSA. Would you please introduce yourselves for the recording?

FORTINO [SETTLER COMMANDER]
Good afternoon, son, the name's FORTINO, I'm this settlement's commander.

YUDHISTIRA [CIVIL ENGINEER]
I'm a civil engineer at Rodak City, my name's YUDHISTIRA.

STEVEN H. [FARMER]
Good afternoon, my name is STEVEN H., I'm one of the farmers over at the only farm in Rodak.

VERON [INTERVIEWER]
Okay, let's start with the default question, what are your roles at RUSA? Let's start with the commander, shall we?

FORTINO [SETTLER COMMANDER]
My role here serves as the leader of this hereby settlement, my main task is to assign tasks to the other permanent settlers and request for supplies to keep me people prosperous.

VERON [INTERVIEWER]
You said permanent settlers, yes? So, that implies there are temporary settlers?

FORTINO [SETTLER COMMANDER]
Of course, son! Permanent settlers are like ye farmer and civil engineers, they are permanent residents. Temporary settlers are settlers that come and go, like recently ye biological engineers and chemists.

VERON [INTERVIEWER]
(writing on notepad)
Oh, alright. Those biological engineers and chemists, they come from Earth I assume?

FORTINO [SETTLER COMMANDER]
Right-o! They usually come for studying something recently discovered here.

VERON [INTERVIEWER]
Is this the same for every non-Earth RUSA-based settlement across the universe?

FORTINO [SETTLER COMMANDER]
Yes, son, this applies to all of ’em.

VERON [INTERVIEWER]
Alright then, how about those temporary settlers again, do you know which people can be temporary settlers?

FORTINO [SETTLER COMMANDER]
Anyone can, son, that’s the point of the settlement existing in the first place, haha!

VERON [INTERVIEWER]
(chuckling)
Alright then. How many commanders are there for each settlement?

FORTINO [SETTLER COMMANDER]
For small planets, there would usually be only one, but for large planets, there would be several for different locations, like hear ye, I’m commander of Rodak City, but there would be another commander at a different town, since Yggdrasil is a large planet with plenty of habitable locations.

VERON [INTERVIEWER]
That is interesting, alright then. I think we can move on to the civil engineers, uhm, what do you guys do here?

YUDHISTIRA [CIVIL ENGINEER]
We build the residential area you're at right now, the houses, the laboratories, you name it.

VERON [INTERVIEWER]
I take it that building these are assigned to you guys?

YUDHISTIRA [CIVIL ENGINEER]
Yessir, they're usually assigned to us by the commander.

FORTINO [SETTLER COMMANDER]
Oh yes, I forgot to mention, Sometimes ye higher-ups task us with constructing new buildings, either for residential purposes or for research, but sometimes I could also ask my engineers to build something I deem worthy.

VERON [INTERVIEWER]
That is interesting. Alright then, how about materials? I take it that the commander could request for supplies, but could the others request, too?

YUDHISTIRA [CIVIL ENGINEER]
All our requests go through the commander, we request for additional building materials like cement, sand, water, and sometimes equipments like cement mixers.

VERON [INTERVIEWER]
And the commander would forward the request to the higher-ups?

FORTINO [SETTLER COMMANDER]
Right again, me son. But I also have the authority to reject ye request if I don't find it worthy.

VERON [INTERVIEWER]
Who exactly does the request go to, if you don't mind me asking?

FORTINO [SETTLER COMMANDER]
I'm not really sure who exactly gets ye request, but it's definitely forwarded towards ye Directors.

VERON [INTERVIEWER]
Alright then. Let's go back to the engineers, I assume a progress report is mandatory during construction?

YUDHISTIRA [CIVIL ENGINEER]
Yes, we are all about transparency here, we write down all the materials used, the progress of construction, y'know? Oh, and since we're on a planet that has not been studied thoroughly, we would usually see abnormal things --- anomalies, if you will --- this would also usually be reported to the commander via an anomaly report.

VERON [INTERVIEWER]
What kind of impact would the anomaly report have?

FORTINO [SETTLER COMMANDER]
Best case? It's nothing and I reject the report. Average case? I forward the report to ye Directors and they send a scientist to study the matter. Worst case? Settlement abandonment, I've done it once before I became commander of Rodak City.

VERON [INTERVIEWER]
(writing on notepad)
Settlement abandonment? You have the authority to do that?

FORTINO [SETTLER COMMANDER]
Yes, me son. Commanders have the authority to send a request to abandon settlement to ye Directors alongside an anomaly report, if they deem ye report to not be fraudulent, then we are allowed to abandon settlement, we either move to a different location on ye same planet, or abandon ye planet altogether.

VERON [INTERVIEWER]
Oh, I see. But you also said you can send reports only?

FORTINO [SETTLER COMMANDER]
Yes, usually I would forward a report made by settlers here, whether a permanent settler or not, or I could make me own report and send ’em to ye Directors.

VERON [INTERVIEWER]
That makes sense. Alright then, I think we can move on to the farmers, then.

STEVEN H. [FARMER]
We farmers do what you would expect a farmer would do, we take care of the farm of the settlement. We grow plants, we take care of cattle, anything an Earth farmer would do.

VERON [INTERVIEWER]
(writing on notepad)
I recall you said that you are a farmer in the only farm in Rodak City, would there usually be one farm per settlement or could there be multiple?

STEVEN H. [FARMER]
Well yes! Before I was relocated to Rodak, the settlement I was at had 3 farms.

VERON [INTERVIEWER]
Relocation?

FORTINO [SETTLER COMMANDER]
Relocation happens quite often, me son, it usually happens when a settlement is abandoned or when ye Directors see fit.

VERON [INTERVIEWER]
I see, so it’s not the commander’s choice?

FORTINO [SETTLER COMMANDER]
Nope! I used to be head of security over at ye Berlin base on Earth before I was relocated as the commander here.

VERON [INTERVIEWER]
(writing on notepad)
That is interesting, alright then. How about tasks, do farmers also get them?

STEVEN H. [FARMER]
Sure do! Like the engineers, progress reports are necessary.

FORTINO [SETTLER COMMANDER]
All permanent settlers will have tasks, me son, either indirectly from ye Directors or directly from me, but either way, they all must come through me.

VERON [INTERVIEWER]
Alright then, hmmm, how about anomalies, I assume there would be way more anomalies in farms that on construction sites, right?

STEVEN H. [FARMER]
You betcha, we see weird things all the time.

FORTINO [SETTLER COMMANDER]
To be fair, son, any settlers can report an anomaly to me, it’s standard protocol.

VERON [INTERVIEWER]
I see, I see. How about requests, then?

STEVEN H. [FARMER]
We could also request for farming necessities, like cattle food, seeds, or farming equipment.

FORTINO [SETTLER COMMANDER]
Same logic as reports, son, anyone can make a request through me. Speaking of reports, anomalies are not ye only thing you can report, you can report other settlers if they are troublesome, son, then I would have ye authority to request for ’em to be sent back to Earth.

VERON [INTERVIEWER]
Oh?

FORTINO [SETTLER COMMANDER]
Yes, son, it’s not often that it happens since ye Directors have extensive background screenings for personnel, but it could happen.

VERON [INTERVIEWER]
What happens to them while they wait for the request to be sent back to Earth?

FORTINO [SETTLER COMMANDER]
We place them on house arrest, son!

VERON [INTERVIEWER]
Oh, of course, that makes sense, haha. I assume you’d want that on the software, too, captain?

FORTINO [SETTLER COMMANDER]
That would be terrific, son. It’s sad that it happens, but it’s the only way to ensure peace and prosperity around here.

VERON [INTERVIEWER]
Alright then. I think that should be all the questions I have, do you guys have anything for me before we end this survey?

YUDHISTIRA [CIVIL ENGINEER]
Oh, we request that our inventory be embedded in the software, so that it would make it easier for us to find things we need.

STEVEN H. [FARMER]
Oh yes, for us, too. And let us have health checks for our plants and livestock, like a log for our farm.

YUDHISTIRA [CIVIL ENGINEER]
Oh, for us, too, but for our buildings.

VERON [INTERVIEWER]
(writing on notepad)
That is possible. How about for the captain?

FORTINO [SETTLER COMMANDER]
Hmm, let me have access to a list of all the settlers at my camp, their roles, whether they are permanent or not, where they're staying here, reports if any and let me have access to what they wanted and we're good, son.

YUDHISTIRA [CIVIL ENGINEER]
Oh, and of course we engineers should be able to view our own assigned residence as well.

VERON [INTERVIEWER]
(writing on notepad)
Al...right then, I guess we can conclude our meeting, thank you for the time, gentlemen, have a wonderful day.

End of transcript.

7 Psychiatry Division

INT. RUSA REINHART'S PSYCHIATRY OFFICE, LONDON, ENGLAND, PLANET EARTH NIGHT

RYUU [INTERVIEWER]
Good evening, REINHART and ADRIAN, my name is RYUU, I am here to conduct a brief interview to gain insight for an internal software being developed here at RUSA.

REINHART [PSYCHIATRIST]]
Good evening, I am here as the psychiatrist.

ADRIAN [PSYCHIATRIST ASSISTANT]
I'm as the assistant.

RYUU [INTERVIEWER]
Splendid. I think we can hop on to the first question of the night, what is it that you guys do here at RUSA?

REINHART [PSYCHIATRIST]
Well, it's simple really, I'm literally a psychiatrist hired at RUSA. I would do what you would expect a psychiatrist would do, I have appointments with my patients and track their well-being.

ADRIAN [PSYCHIATRIST ASSISTANT]
And I act as more of a secretary for the psychiatrist, handling the administrative parts of the job.

RYUU [INTERVIEWER]
Like what, if you don't mind me asking?

ADRIAN [PSYCHIATRIST ASSISTANT]
I do mind, actually.

2 seconds of silence.

ADRIAN [PSYCHIATRIST ASSISTANT]
(breaking the tension)
I'm just joking, lad.

RYUU and ADRIAN both laugh while REINHART takes a sip of his black coffee.

RYUU [INTERVIEWER]
Thank God, I thought we got off the wrong foot.

REINHART [PSYCHIATRIST]
(sarcastic)
Quite the jester, he is.

ADRIAN [PSYCHIATRIST ASSISTANT]
Take it easy, lad, haha. The administrative parts of the job includes handling patients' appointments, like setting up the date when both the doctor and the patient are free.

RYUU [INTERVIEWER]
Alright then, that means you have the schedule of your doctor and the patient's?

ADRIAN [PSYCHIATRIST ASSISTANT]
In a perfect world, I'd have both, but currently I only have the doctor's schedules.

RYUU [INTERVIEWER]
I think we can make that happen, your perfect world, I mean.

ADRIAN [PSYCHIATRIST ASSISTANT]
Really? Cheers, lad!

RYUU [INTERVIEWER]
But for privacy concerns, we'd make it so that you can only see the schedule if they allow you to access it.

ADRIAN [PSYCHIATRIST ASSISTANT]
Good enough for me, whatever makes my life easier.

RYUU [INTERVIEWER]
(laughing)
Alright, let's go back to the patients, what kind of personnel do you handle usually, doctor?

REINHART [PSYCHIATRIST]
Nobody's off limits, maybe except the higher-ups.

REINHART sips black coffee.

RYUU [INTERVIEWER]
Just to be clear, higher-ups here means the Directors and anyone above them?

REINHART [PSYCHIATRIST]
Precisely!

RYUU [INTERVIEWER]
Alright, so, another psychiatrist could be a patient for you?

REINHART [PSYCHIATRIST]
Of course, either from the same location or not, it’s quite common to go insane within this line of job.

RYUU laughs.

RYUU [INTERVIEWER]
(writing on notepad)
So, anyone can be a patient, except for higher-ups, right. Alright then, how about logs? I’m sure you keep track of your patients’ well-being?

REINHART [PSYCHIATRIST]
Well, of course, we have a log of every patient we’ve ever interacted, their appointment findings, recovery process, you name it.

RYUU [INTERVIEWER]
Alright, would the assistant, do they have access to the logs, too?

ADRIAN [PSYCHIATRIST ASSISTANT]
The GDPR forbade me to have extensive records of a patient’s data, so I won’t have extensive records of what they’re telling the doctor, but I do have a read only access of our patients and the log of their recovery process.

RYUU [INTERVIEWER]
Oh, I’m assuming the other countries would also have this rule, right?

REINHART [PSYCHIATRIST]
(sips coffee)
Of course, the Americans follow their HIPAA, the Europeans follow the GDPR, Canadians PIPEDA, and the others, I don't quite remember all of them.

RYUU [INTERVIEWER]
I see, countries without personal data regulation would allow for their assistants to read extensive personal information?

REINHART [PSYCHIATRIST]
The employee handbook for us psychiatrists don't allow for that kind of foul play, since they want what's best for their personnel, since a good employee makes good work, we don't even have access to patients or their logs from other psychiatrists.

RYUU [INTERVIEWER]
Alright then, haha.

REINHART [PSYCHIATRIST]
Good choice.

RYUU [INTERVIEWER]
The doctor is allowed for updating the logs, right?

REINHART [PSYCHIATRIST]
Precisely.

RYUU [INTERVIEWER]
Alright then, I think for my last question, how many psychiatrists are there in each base?

REINHART [PSYCHIATRIST]
At least one psychiatrist per base as to my knowledge. Oh and each psychiatrist can only have one assistant.

RYUU [INTERVIEWER]
Does this include those based outside of Earth?

REINHART [PSYCHIATRIST]
I mean, we could be temporarily relocated outside the planet, just not permanently, we are always located somewhere on Earth, just could be moved temporarily, that’s the point of having more than one psychiatrist on standby on each Earth base.

RYUU [INTERVIEWER]
Alright then, I guess that concludes my questions, do you gentlemen have anything else for me?

REINHART [PSYCHIATRIST]
I’ve got nothing else.

ADRIAN [PSYCHIATRIST ASSISTANT]
Nah, lad, cheers.

RYUU [INTERVIEWER]
Okay, thank you for the time, have a wonderful rest of your night, gentlemen.

End of transcript.

8 Space Station Settlers

INT. RUSA TAU-20 SPACE STATION CANTEEN

VERON [INTERVIEWER]
Good afternoon, I am here to conduct a simple interview to determine the requirements for the internal software being developed for RUSA. Would you please introduce yourselves for the recording?

KEVIN [SPACE STATION SETTLER]
Hey there, I'm KEVIN, I'm a permanent resident at Tau-20.

HENDRA [SPACE STATION SETTLER]
Hi, the name's HENDRA, I'm just like KEVIN, though our official title in the company is "Space Station Settler".

VERON [INTERVIEWER]
Alright, first question, what's your role at RUSA as a space station settler?

HENDRA [SPACE STATION SETTLER]
It's trivial, really, we just take care of our space station. We could also report any findings to the nearest galactic security team.

HENDRA [SPACE STATION SETTLER]
But not all of our findings should be reported, to be fair, we could, like, keep them to ourselves, since we have our own archive of findings and reports, y'feel me?

VERON [INTERVIEWER]
Hmmm, how about the space station itself then? Why are you taking care of it?

KEVIN [SPACE STATION SETTLER]
I mean you're technically a reason right now, haha.

HENDRA [SPACE STATION SETTLER]
Yeah, this place acts, like, uh, a rest stop, somewhere personnel and sometimes independent space travelers can stop by to rest or refuel.

VERON [INTERVIEWER]
Interesting, so that's all you do? You take care of the space station?

KEVIN [SPACE STATION SETTLER]
Yeah.

VERON [INTERVIEWER]
Alright then, any requests you would like to make for the software we're developing to make your lives easier?

2 seconds of silence while KEVIN and HENDRA look at each other.

HENDRA [SPACE STATION SETTLER]
I mean, I guess inventory could be easier.

VERON [INTERVIEWER]
That's great, what do you do for inventory?

HENDRA [SPACE STATION SETTLER]
It's mostly supplies like food, clothing, bedsheets, uhh, actually, I can send our inventory to you later.

VERON [INTERVIEWER]
That would be great!

KEVIN [SPACE STATION SETTLER]
Oh, can you also allow us to upload an interactive map for our visitors to see?

VERON [INTERVIEWER]
That is possible, how do you want that to work though?

KEVIN [SPACE STATION SETTLER]
Just make it so that we can upload an image of our station's layout or draw it, then annotate parts of it, and when you click on it, boom, it shows a description.

HENDRA [SPACE STATION SETTLER]
Yeah, that would be great, though I’m much on board for the uploading the picture one, though.

VERON [INTERVIEWER]
(writing on notepad)
Alrighty then, uploading...layout...and...annotate.

HENDRA [SPACE STATION SETTLER]
Oh, right, I almost forgot, since we are in a station, we could also request for supplies.

VERON [INTERVIEWER]
Oh, may I ask to whom specifically?

HENDRA [SPACE STATION SETTLER]
Ermm, we’re not really sure, to be honest, but we know it sometimes get rejected or accepted, it’s a request afterall, but mate, if you’re gonna send someone to space, you gotta let them get food, amirite.

VERON [INTERVIEWER]
(writing on notepad)
I feel ya, I feel ya, haha. Speaking of requests, I talked to the fellas over at Yggdrasil, they said they could propose to abandon their settlement, same could be applied here?

HENDRA [SPACE STATION SETTLER]
Oh [EXPLETIVE], yeah, but we’ve never really required to do that.

VERON [INTERVIEWER]
Oh, alright then, anything else, gentlemen?

1 second of silence.

KEVIN [SPACE STATION SETTLER]
How about digitizing a log of personnel on board?

VERON [INTERVIEWER]
(writing on notepad)
That could work, on it. Would that be it, gentlemen?

KEVIN [SPACE STATION SETTLER]
Well, I've got no more ideas.

HENDRA [SPACE STATION SETTLER]
Me neither.

VERON [INTERVIEWER]
Alright then, I guess we could end this interview right here, thank you for the time, have a good rest of your evening.

End of transcript.

9 Medical Department

EXT. RUSA RIO DE JANEIRO HEADQUARTERS OUTDOOR CANTEEN DAY

RYUU [INTERVIEWER]
Good morning, I'm here on behalf of RUSA to conduct a brief survey for an internal software being developed, this interview is conducted, so that we can achieve an application that appeals to your best interest. Before we begin, would you mind introducing yourselves for the recording?

DANIEL [HEAD OF MEDICINE]
Good morning, I'm Dr. DANIEL, my role here is the head of this department at Rio de Janeiro.

ALIN [MEDICAL STAFF]
I'm Dr. ALIN, I'm an EM doctor here.

RYUU [INTERVIEWER]
Alright, let's start with a basic question, what do you mainly do around here? Dr. DANIEL?

DANIEL [HEAD OF MEDICINE]
To put it simply, I run the administrative part of the department, like allocating staff shifts, as in the time they work. Budgeting is also part of my job description, when I feel like the department is lacking in some area, I would request for more funding from the higher-ups.

RYUU [INTERVIEWER]
If I may, do you know which higher-up would you usually request to?

DANIEL [HEAD OF MEDICINE]
That, I'm not sure.

RYUU [INTERVIEWER]
(writing on notepad)
Okay, anything else, doctor?

Dr. DANIEL thinks for a while.

DANIEL [HEAD OF MEDICINE]
Still related to budgeting, we also send budget reports, like how we spend the provided funds. And also we are in charge of inventory as well, that applies to me and my crew, for our medicines and medical equipment.

RYUU [INTERVIEWER]
(writing on notepad)
Great, then, inventory... I guess we can move on to Dr. ALIN, apart from inventory, what do you mainly do here as a doctor in the department?

ALIN [MEDICAL STAFF]
Since I'm an EM doctor, I'm much more prevalent in the ER, however, I'm pretty sure most doctors here have similar job descriptions if you're looking for an app, our fields just define how, when, and where we treat the patients.

RYUU [INTERVIEWER]
(writing in notepad)
Alright.

ALIN [MEDICAL STAFF]
But the main thing we do is, as Dr. DANIEL said, inventorying and treating and logging our patients.

RYUU [INTERVIEWER]
I see, I see. Alright then, and I'm assuming the head of medicine should also be able to have access to the patients' records as well?

DANIEL [HEAD OF MEDICINE]
Yes, considering the head of medicines are all still practicing MDs, we should also be able to see them in case of emergencies, all staffs would also be able to access them, just not share them with anyone outside the medical department, though.

RYUU [INTERVIEWER]
(writing on notepad)
Can I ask a question, Doctor? The medical department and the psychiatry department share a patient log, right?

ALIN [MEDICAL STAFF]
Yes, not sure why we're split though.

RYUU [INTERVIEWER]
Alright then, how about the fields of medicine, apart from psychiatry, of course? Is there any organizational structure in that, or?

DANIEL [HEAD OF MEDICINE]
The official title for them at RUSA would be medical staff, their fields don't define their titles, but we still keep track of them since we need specialist consults and patients need specialists, too. It only makes sense.

RYUU [INTERVIEWER]
Ohh, makes sense, alright alright, so you allocate their shifts based on their fields right?

DANIEL [HEAD OF MEDICINE]
Right, speaking of shifts, make sure that I have a list of all my staffs, and make sure they can see their own shifts in the application you're making. Oh and before I forget, I would like to be able to contact other head of medicines from other bases, too.

RYUU [INTERVIEWER]
(writing on notepad)
Done, but if you don't mind me asking, how many head of medicines are there in a base?

DANIEL [HEAD OF MEDICINE]
One if it's a small base, but could have more than one if it's a larger one, like New York's.

RYUU [INTERVIEWER]
Ah, I see. Alright then, I guess that’s all the question I have for you both today, do you have any other suggestions before we end the meeting?

ALIN [MEDICAL STAFF]
Not for me, my job is much more "practice" rather than "operational".

DANIEL [HEAD OF MEDICINE]
Fine by me, as well.

RYUU [INTERVIEWER]
Great, have a wonderful rest of your day, then, gentlemen, thank you for being a part of this meeting.

End of transcript.

10 Sanitary Department

INT. RUSA MOSCOW HEADQUARTERS BREAK ROOM DAY

RYUU [INTERVIEWER]
Good afternoon gentlemen, my name is RYUU, I am here today on behalf of RUSA we are developing an internal software for personnel to use, this interview is conducted to gather information regarding the requirements of the project. Before we start the day, would you please introduce yourselves for the recording.

VEKA [HEAD OF SANITARY]
Afternoon, name's VEKA, I'm the head of the Moscow base's sanitary department.

MARVEL [SANITARY STAFF]
Hey, I'm MARVEL, I'm part of the clean-up crew at Moscow's sanitary department.

RYUU [INTERVIEWER]
Thank you, let's start off with a warm-up question shall we, what are your main jobs at RUSA?

VEKA [HEAD OF SANITARY]
I think I'll start first, the head of a sanitary department would usually be tasked budgeting of the sanitary department, scheduling for its staffs, and inventory.

MARVEL [SANITARY STAFF]
Whereas for the staffs, despite having different internal divisions, our jobs are doing tasks assigned to us, like cleaning up a crime scene, if there is one, or mail delivery. Oh, and we could also do inventorying, too.

RYUU [INTERVIEWER]
Crime scene?

VEKA [HEAD OF SANITARY]
It’s not just crime scenes, sometimes ships crash, or maybe [redacted].

RYUU [INTERVIEWER]
[redacted]?

VEKA [HEAD OF SANITARY]
Do they not tell you about them?

RYUU [INTERVIEWER]
I mean, I was briefed about it, but I have not heard any other departments mention them.

VEKA [HEAD OF SANITARY]
Oh, alright then, just scratch that I’ve ever said that from the record, hahaha.

RYUU [INTERVIEWER]
(chuckling)
Alright, alright, haha. Hmmm, I have a few questions for VEKA, the first one is about budgeting, how would you describe that, uhm, descriptively, like explicitly what do you do?

VEKA [HEAD OF SANITARY]
Request funding from the higher-ups, wait for ’em to either approve or reject my request for funding, and if I get the funds, report any expenses.

RYUU [INTERVIEWER]
Alright, so for inventorying, it’s just adding or removing items from the inventory?

VEKA [HEAD OF SANITARY]
Exactly, mops, brooms, industrial grade cleaners, soap, basically any cleaning equipment you can think of.

RYUU [INTERVIEWER]
I assume this is the same for the staffs?

MARVEL [SANITARY STAFF]
Yeap, but we generally do it at a far smaller scale, like we only remove items when we use them, or maybe add them if we paid for something out of pocket.

RYUU [INTERVIEWER]
(writing on notepad)
Alright then, how about scheduling? How does that work?

VEKA [HEAD OF SANITARY]
I just set my staffs' shifts, simple stuff honestly, oh make sure they can see their own schedules on your application later on.

RYUU [INTERVIEWER]
(writing on notepad)
Haha, that's no problem. Uhm, also I heard that MARVEL mentioned that he's part of the clean-up crew, are there more than 1 crew within a department?

MARVEL [SANITARY STAFF]
Oh, yes, there's the clean-up crew, the mail delivery crew, the sanitary inspector crew, disposal crew...uhh...

VEKA [HEAD OF SANITARY]
The wastewater crew, and the transport crew.

MARVEL [SANITARY STAFF]
Yeah!

RYUU [INTERVIEWER]
Oh, what are the difference between each internal, uhm...division?

VEKA [HEAD OF SANITARY]
Well, there is the clean-up crew, this is an umbrella crew basically, they have the most job descriptions, they take care of crime scenes or wreckage scenes like previously said, or they would routinely clean the the base all around. Then we have the mail delivery crew, their main job is getting the mails from mailboxes from one place to the other, but since this software is coming up, I'm planning on retiring this internal division honestly, so no need to even include them in your application, requests can just go through the application now.

RYUU [INTERVIEWER]
Retiring the division? So, the staffs would be moved to another division?

VEKA [HEAD OF SANITARY]
I mean it happens already, staffs can request to move divisions to me whenever they want as long as the staff quota for a division is met, this change usually happens during scheduling, which is every quarter, but of course, I could reject the requests, it's all up to me only. However, for new recruits, I'd choose the division for their first quarter.

RYUU [INTERVIEWER]
I see I see, how about the quota?

VEKA [HEAD OF SANITARY]
It depends on the division, the base, and the time honestly, haha, but it's what the head of the department sees fit, we can change it frequently, too.

RYUU [INTERVIEWER]
(writing on notepad)
Naturally, Continue with the internal divisions, please.

VEKA [HEAD OF SANITARY]
The inspector crew is like the QA team, they check for hygiene or safety issues, they're like OSHA, basically, they do routine checks on machines or just things in general, these guys can send reports of any findings to me, then I might make it into a task for the other divisions. Then we have the, uhm, the disposal crew, like their name suggests, they're the division that helps with taking care of wastes, like hazardous material, toxic sludge, [redacted], or basically anything that needs to be thrown away or incinerated. We also have the wastewater crew, they're more in the background, they treat wastewater and sewage for RUSA. And last, the transport crew, they just transport things when assigned.

RYUU [INTERVIEWER]
(writing on notepad)
Trans...port...when...assigned...Alright, so each task you assign them, more than one crew can be assigned to it?

VEKA [HEAD OF SANITARY]
Yeah, but I also don't assign an entire crew to one task unless necessary, I'll assign people within the crew for the task obviously, speaking of crews, make sure I can see the people in each crew in the application, and who was in what crew previously for better judgment during scheduling or assigning to tasks.

RYUU [INTERVIEWER]
Haha, no problem. Hmmm, so, the internal divisions, are they official?

VEKA [HEAD OF SANITARY]
The staffs' official titles are not the internal divisions they are in, so, it's not official in that sense, but official in the sense that they are standard operational procedures for RUSA sanitary departments all over the universe.

RYUU [INTERVIEWER]
Ah I see, and correct me if I'm wrong, each divisions are not that different to each other, right? All they do is inventory and send progress reports on tasks? But job description wise, they are different?

VEKA [HEAD OF SANITARY]
I wouldn't say that honestly, like the inspectors could send reports to me regarding problems, or, oh! The disposal team should have a log of how certain things should be destroyed or handled with, like a documentation of some sorts, the same goes with the wastewater team.

RYUU [INTERVIEWER]
(writing on notepad)
That could happen, anything else you guys want to add to the software?

VEKA [HEAD OF SANITARY]
Erm...I think that's all, to be honest, MARVEL?

MARVEL [SANITARY STAFF]
Yeah, same for me, too.

RYUU [INTERVIEWER]
Alright then, I guess we can end today's meeting here, thank you for the time gentlemen, have a great day ahead of you.

End of transcript.

11 Directors

INT. RUSA DIRECTORS CONFERENCE ROOM NIGHT

THE DIRECTOR
I gathered us all here today to discuss about the development of our internal software. To aid and abet us, I've invited RYUU and VERON to discuss with our personnel their job descriptions and their preferences for the software.

RYUU
Good evening.

VERON
Hello.

THE DIRECTOR
I've invited everyone here to describe your job descriptions and how our subordinates interact with you. ACCOUNTANT, you start first.

THE ACCOUNTANT
I monitor the company's monetary reports, like budgets or invoices. I oversee any budget request or report, and invoice to check the validity of each monetary spending.

RYUU
I have a question, are you also the one that approves them?

THE ACCOUNTANT
No, any request matter is voted on by everyone within this room, that includes budgetary.

VERON
What do you do if you see foul play in the reports?

THE ACCOUNTANT
I mark the budget report, then I'd get the people involved and question further, we would then have a meeting regarding the incident. We as in The Directors. It would be decided then.

RYUU and VERON write on their notepads.

THE ACCOUNTANT
I think we can move on.

THE DIRECTOR
Right. LIBRARIAN.

THE LIBRARIAN
My job is to minimize the spread of unwanted information within our archives. I'm in charge of redacting, deleting, or making logs or items only accessible to certain people or roles.

RYUU
What information does your position handle though?

THE LIBRARIAN
All of them.

VERON
How about redacting, how does that look like?

THE LIBRARIAN
It's just censoring certain information from documents.

RYUU and VERON write on their notepads.

THE DIRECTOR
Next, NOMAD.

THE NOMAD
I have the authority to relocate and reposition all staffs under us Directors, and I send tasks towards settler commanders and the sanitary department via the head of sanitary.

VERON
If you don't mind me asking, what does the task look like?

THE NOMAD
(puts out cigarette)
You'll get a document later.

VERON
Oh, alright.

THE ARTIFICER
I'll go next, I'm THE ARTIFICER, I assign tasks to the Mathematics department, Physics department, and the aerospace engineers. These tasks could be on different parts of the Earth bases or out of planet as well. I proxy help requests from other departments, whether that is a request coming in, or a response going out.

RYUU
Why specifically them?

THE ARTIFICER
(scoffs)
Because they are more quantitative, child, you see, I'm good with numbers.

RYUU
Oh, alright, I see I see.

RYUU and VERON write on their notepads.

THE DIRECTOR
Alright, OBSERVER.

THE OBSERVER
Similar to ARTIFICER, I assign tasks to the biologists, the chemists, the agricultural engineers, and the biological engineers, I also track their progresses. And similarly, they could be assigned out of the planet or in-planet as well, and I also proxy help requests towards my subordinates, if I deem worthy, I can create the request as a task to my subordinates, but to be clear, not all tasks are help requests.

THE ARTIFICER
Oh right, yeah, I do that, too, track my subordinates' progress on a task, and the request to task thing...And the not all tasks are help requests.

RYUU and VERON write on their notepads.

RYUU
May I ask, what is the difference between relocation and assigning to another place?

THE NOMAD
Relocation is changing their literal location for the time-being, it’s not exclusively for tasks, but just moving their geographic location to another place, whether that be on Earth or out of planet. This reallocation can be either temporary or permanent.

THE OBSERVER
Whereas assigning a task to a different location has a smaller scope, I can only assign to a different place when it’s related to the task I assign.

RYUU and VERON write on their notepads.

THE DIRECTOR
Next, WANDERER.

THE WANDERER
I assign the sectors or planets to the astronauts to explore, and I handle their mission completion approval requests, and I have the access to view their status reports from missions.

RYUU
What are the differences, sectors and planets?

THE WANDERER
A sector is a provided area I designate, it’s usually about 5 light years, but I can change it depending on the sector, when I assign astronauts to a sector, it’s usually to check on or discover something within that sector. A planet is just a planet, when I assign an astronaut to a planet, it’s a terraneous mission.

RYUU
Those seemed like two very different missions, how do you determine who to send?

THE WANDERER
Each astronaut has a count of missions they've went to, either galactic or terraneous, so I usually prioritize terraneous missions for someone who has more experience on terraneous missions, and the same logic for the galactic or sector missions. I am also in charge of renaming both marked territories, that includes planets and sectors.

RYUU and VERON write on their notepads.

THE TASKMASTER
Alrite, I think it's only fair if I go next. G'day mates, I'm THE TASKMASTER, my job is practically a combination of ARTIFICER, OBSERVER, and WANDERER, but only her assigning tasks part, that's why I'm called TASKMASTER. I keep an eye on their progress as well, and when they send in a request for conclusion, I give the final nod.

VERON
By THE WANDERER's task, you mean assigning missions to the astronauts, right?

THE TASKMASTER
Bloody 'ell, what else do you think, mate?

RYUU and VERON write on their notepads.

THE WANDERER
God, eccentric as usual, you are.

THE TASKMASTER
The call is coming from inside the house, love.

THE WANDERER giggles.

THE DIRECTOR
Enough. We move on, GUARDIAN, you're next.

THE GUARDIAN
I take charge of the security teams both here and on Earth, they send me daily reports of their findings, and any broadcast request they want to send goes through me. I should also have a direct line of communication with the teams, so make sure to build one in your software later on, since I'm much more experienced in email-esque messaging, make sure to build one like it for our communication line.

RYUU
Oh, I have a question, I thought requests are supposed to be discussed with everyone?

THE GUARDIAN
There are exceptions, sometimes it just goes to one person, this is an example.

THE DIRECTOR
We'll get to voting later.

THE GUARDIAN
Ah, right, I also have the authority to send broadcasts myself if I deem necessary.

VERON
The broadcasts are to everyone, right?

THE GUARDIAN
I choose the people to send to, it could be filtered by group, or by personnel.

RYUU
May I ask, what kind of danger do we usually face?

Inaudible whispers echo through the conference rooms while some stole quick glances at the two newcomers.

THE GUARDIAN
We deal with [redacted], they are [redacted], only chosen personnel has access to the knowledge of these [redacted].

THE DIRECTOR
However, this will be none of your concerns during interviewing the staffs we've designated you both with, they are not staffs concerned with the [redacted], but some have knowledge of their existence, if they are to say something about it, ignore them or take the conversation away from the topic.

RYUU and VERON write on their notepad.

THE DIRECTOR
Next, STATISTICIAN.

THE STATISTICIAN
I proxy the requests towards the data analyst team, before they go to the data analysts, I check whether the data request is valid or no, I could then reject or accept said request, right now, they send out a copy of the request to me, but with this software, just let me get the requests first, then the data analyst team gets it if I approve of it. Any response should also go through me to ensure that no sensitive data should go through, similar to GUARDIAN, my requests don't need to go through voting, just through me.

VERON
May I ask, what kind of data does your team handle?

THE STATISTICIAN
They handle all data except medical data, just in case the government questions about it.

RYUU and VERON write on their notepad.

THE DIRECTOR
COORDINATOR.

THE COORDINATOR
Greetings, I’m THE COORDINATOR, I organize events or meetings with external parties, and I also have my own archive of plane tickets, venue invoices, and anything else that involves with hosting an event.

RYUU
The event is company-wide?

THE COORDINATOR
Yes, for example just a few weeks ago, OBSERVER, ARTIFICER, and a couple of scientists and engineers from their respective department had a meeting with CERN’s board of directors discussing about possible future research in a newly discovered planet.

RYUU and VERON write on their notepads.

THE OVERSEER
I’ll go next, I’m THE OVERSEER, I’m just a combination of NOMAD and GUARDIAN, however I have no authority over what could be broadcast and what is not, but I do have access to their line of communication.

RYUU and VERON write on their notepads.

THE DIRECTOR
Last, ANCHORMAN.

THE ANCHORMAN
My main job is broadcasting information to people, similar to GUARDIAN, but I do it much more frequently since I don’t only broadcast during times of danger, it’s any information I deem worthy enough, so if any other staff but the security teams requests to broadcast, they come to me.

VERON
Who else usually send out broadcasts?

THE ANCHORMAN
Anyone can, darling.

RYUU and VERON write on their notepads.

THE ANCHORMAN
Apart from broadcasting, I’m also in charge of terminating our personnel, apart from the Directors and Administrator, obviously.

RYUU and VERON write on their notepads.

THE DIRECTOR
Before we get to the general job descriptions of the Directors, I will discuss mine first. I’m THE DIRECTOR, my main job description is to hire personnel outside of this room, and would therefore should be able to create their accounts within this software, and I am able to do what every other Directors member can.

RYUU and VERON write on their notepads.

THE DIRECTOR
In general, the Directors should be able to create meetings. Any one of us can create a meeting and choose who to include, even THE ADMINISTRATOR. Voting is a separate matter. Requests are automatically considered voting matters, except for the requests previously mentioned that should only go through one of us. We can also initiate a vote on any pressing issue if necessary. We have three options when voting: "Yay" for agreement, "Nay" for disagreement, and "Abstain". Any vote must include reasoning for record-keeping, and any vote can be switched as long as it is within the given time.

VERON
When do you guys usually vote.

THE ANCHORMAN
We usually require at least 8 out of the 13 members present for a vote to be valid, darling. Since we are digitizing things, voting sessions will now take place at 11 A.M. and 7 P.M.

RYUU
Okay, so we assume that requests are only accepted when there are more "Yay" votes than "Nay" votes.

THE TASKMASTER
it can’t be that simple, mate! There should be at least 8 votes when the time is out, only then we compare the amount of "Yay" votes and "Nay" votes.

VERON
How about "Abstain"?

THE WANDERER
Those count as votes, but they don’t affect the "Yay" nor "Nay" counts.

VERON
What happens if less than 8 members vote on the matter?

THE ANCHORMAN
Then just snooze the voting process darling, and send a reminder to every one of us.

VERON
How long should the snooze...

THE ANCHORMAN
Just remind us every 15 minutes, that would be splendid.

RYUU
What if every vote is "Abstain"?

THE DIRECTOR
Then request denied.

THE STATISTICIAN
Just please make sure every request result be informed back to the person making the request and, if agreed upon, be continued to process.

RYUU
Got it.

THE DIRECTOR
Make sure as well, that as Directors with direct subordinates like, ARTIFICER with mathematicians, physicists, and the aerospace engineers, they should be able to do what their subordinates do, without the requesting to themselves part, but if it’s a request to us all, then it should stay the same.

RYUU and VERON write on their notepad.

THE DIRECTOR
Well, if you have no more questions for us, we can end this meeting. The basic requirements for this application will be sent to you alongside any documents we deem necessary for the development for this application.

RYUU
That would be all, thank you all for this opportunity.

VERON
Thank you.

End of transcript.

12 The Administrator

INT. THE ADMINISTRATOR'S OFFICE, [redacted], [redacted]
DAY

THE ADMINISTRATOR
Good morning gentlemen. I hereby invited you for a quick chat about the software being developed. I would like to state my case.

RYUU
Good morning, it's an honor to meet you, sir, we would be glad to hear what you want to say.

VERON
Yes, it's our pleasure.

THE ADMINISTRATOR
Right then, as The Administrator of RUSA, I have the highest official rank within the walls of these company, and therefore I have the final say in all things. You were just with the Directors right before meeting me here, am I right?

VERON
Yes, sir, that is correct.

THE ADMINISTRATOR
Then you would know about the voting system, right? I do not need to participate in that, however I need the ability to overwrite any decision made.

RYUU and VERON write on their notepads.

THE ADMINISTRATOR
I should also be able to interrupt and terminate any voting process and provide either my agreement or disagreement to the matter, and their votes will not be considered at all.

RYUU and VERON write on their notepads.

THE ADMINISTRATOR
You might have also heard that THE DIRECTOR is the only one doing the hiring process, that is not entirely true. I do those, too, but at a larger scale, since I'm also the one in charge of hiring Directors. I am also in charge of terminating them and any other staff members. And I am also able to relocate and reposition staff members as I deem necessary.

RYUU
So, sir, just to be clear, you should be able to create and delete all personnel accounts?

THE ADMINISTRATOR
That would be great. And make sure that I am able to do whatever every single personnel could do.

RYUU and VERON write on their notepads.

THE ADMINISTRATOR
Right then, gentlemen. I guess we are done, that is all I wanted to say. Thank you for the time.

End of transcript.
